MANAGEMENT DISCUSSION AND ANALYSIS REPORT

Economic Scenario:

Global

During the year 2016-17, the global economic scenario witnessed subdued cross border trade, weak investment, sluggish productivity and policy uncertainties. The overall growth remained below potential. Emerging markets and developing economies witnessed a steady improvement and is expected to pick-up growth in 2017. There was an increase in global commodity prices towards the end of 2016 against slump observed in 2015 with an upward swing in price of crude oil, industrial metals, gold and agricultural commodities. The IMF has forecast a higher Global GDP growth at 3.5% in 2017 and further to 3.6% in 2018 from 3.1% in 2016. Though the core inflation rates remained broadly stable, the headline inflation rates have gone up globally. The increase in prices resulted in deflationary conditions worldwide which resulted in an increase in interest rates in most of the advanced economies, with US Federal Reserve backed by improved growth prospects, raising the monetary policy rate by 50 bps during December 2016 and March 2017.

Since April 2017 the global economic activity has expanded at a modest pace supported by firm growth in advanced and some emerging economies. The US market has faced tightening labour conditions thereby generating wage gains. The Chinese economy is stabilizing especially in manufacturing sector while the Euro segment has witnessed steady increase in retail sector. The Japanese economy has witnessed accelerated growth due to increased exports supported by depreciated Yen and industrial activity.

Indian

In line with the global economy, Indian economy during FY.2017 could see a moderation in GDP from 7.9% in 2016 to 7.1%. On value added basis real GVA (gross value added) growth estimate for FY.2017 has been revised down to 6.7% from 7.8%. Industrial production and credit growth to Industry continued to remain weak. The general economic slowdown continued during the first quarter and could see some movement during the second quarter. On the positive side, the economy was buoyed by the implementation of 7th pay commission.

Besides, a good monsoon helped retain agricultural production buoyant. As per the estimates released by the Ministry of Agriculture, the foodgrains achieved a record output of 273 million tones.

However, private investment has remained anaemic. Low capacity industrial utilization, continued debt overhang of corporate and worsening NPA position of banking sector remained the biggest impediment to private investment.

The overall domestic price pressure remained contained in FY. 2017. The Consumer Price Index (CPI) inflation averaged 4.5% in FY. 2017 (as against 4.9% in FY. 2016), displayed a downward trend largely helped by reduced inflation in goods and services. On the other hand, the Core CPI inflation has averaged 4.7% in FY 2017 as against 4.3% in FY. 2016. The Whole Sale Price Index (WPI) inflation, increased to 3.7% in FY2017 due to reversal of favorable base effect and pick up in oil and commodity prices. A favorable monsoon resulted in decline in food inflation and rationalization of minimum support prices by the Government.

On the fiscal front, the real GDP seems to have slowed in FY. 2017 from FY. 2016. India is expected to remain for some time as one of the fastest growing major economies globally. The real GDP growth will remain between 6.75% - 7.50% in FY.2018. FY.2017 was marked by two major domestic policy developments, Demonetization of Specified Bank Notes (SBN) and the passage of the Constitutional amendment and follow up legislation, paving the way for Goods and Service Tax (GST) implementation.

Demonetization - A bold move by the Government of India

The Government of India took a historic step on 8th November 2016 by demonetizing two higher denomination currency notes ₹500/- and ₹1,000/- with the objective of eliminating the circulation of counterfeit notes, money laundering activities and prevention of corruptive practices involving cash transactions. There was a transient loss in growth momentum after the announcement of demonetization though there was a significant increase in Current Account Deposits (CA),

Savings Account Deposits (SA). Credit growth declined on account of cash dependent sectors and poor utilization of credit during the period. A part of real GVA growth slowdown in FY.2017 owed to first half which slowed to 6.8% as against 8.1% in same period in FY.2016. Q3 FY.2017 - the period when demonetization took place slowed further down to 6.6%. The negative impact of demonetization is expected to be a short term phenomenon. In the long run, impact of withdrawing old currency notes of certain high value denominations is expected to be beneficial, as it is part of a series of strong steps taken by the Government to crush the black economy.

Goods and Service Tax (GST) - A path breaking National Reform

The Government during the year 2016 made a constitutional amendment by introducing the concept of GST in India. GST is a path breaking indirect tax reform which will create a common national market by dismantling inter-state trade barriers. GST will subsume multiple indirect taxes viz., Excise Duty, Service Tax, VAT, Central Sales Tax, Luxury Tax etc., and pave way for growth in economic activity.

It is expected to be rolled out w.e.f., 1st July, 2017, but there are many challenges to be addressed such as meeting the needs of the complex legislative process in the States, arriving at decisions on rates at GST Council, developing a robust IT infrastructure, educating organisations, especially the small ones, etc.

Monetary Policy and Interest Rates

The Reserve Bank of India continued with its accommodative stance in FY.2017. The new liquidity frame work was designed to align the liquidity conditions with accommodative monetary stance for smoother monetary policy transmission over the medium term. It started the year by cutting repo rate by 25 bps in April 2016, to maintain liquidity in the Banking Sector over a period of time. However, in the second bi-monthly Monetary Policy statement 2017-18, the Monetary Policy Committee considering the macro economic situation decided to keep the policy rates unchanged. The RBI is focused in keeping the inflation level close to 4% in order to restore the health in the Banking sector.

INR also remained mostly resilient, helped by improving macro fundamentals, particularly external account. The INR weakened to 68.80 against USD in Q3FY.2017, partly due to global realignment of risk post US Presidential election outcome. The Rupee, however, ended the year at 64.85, rallying by 4.7% by end Q4FY. 2017 from end Q3FY.2017.

The government is showing a renewed focus to address credit quality issues through an ordinance which empower RBI to intervene in resolving NPA assets and these directions will lead to swifter recovery measures by the Banks.

The current state of economy underscores the need to revive the health of Banking sector, generate the environment for the revival of private investment and remove infrastructural bottlenecks.

This downward trend which continued during the month of November 2016 on account of huge inflow of funds into the banking system on the demonetization announcement made by GOI, reversed its course after RBI took measures to suck out the excess liquidity, as also on change in RBI's policy stance from accommodative to neutral. This volatile movement in yield enabled the Bank to earn profit on sale of securities to the tune of ₹107.78 crore as compared to previous year figure of ₹45.34 crore. The Profit on exchange transactions increased from ₹ 80.58 crore last year to ₹97.84 crore in FY. 2017 as surplus cash were deployed in overseas market to earn increased return.

Officers' Association of the Bank effective from 1st July, 2016 for the next 5 years. During the year, the Bank opened 25 new branches and installed 161 ATMs which resulted in higher infrastructure and staffing expenses. OUTLOOK

While reviewing the monetary policy, RBI had maintained the repo rate at 6.25%. As reviewed by RBI, several issues have to be factored into the inflation projections. First it needs to be assessed whether or not the unusually low momentum in the reading for April will endure. It is to be seen whether there will be any policy interventions to arrest the slump in the price of pulses on account of the supply growth caused by a record outflow imports. RBI is of the view the easing of inflation excluding food and fuel may be transient in view of its underlying stickiness in a situation of rising rural wages growth and strong consumption demand. At this juncture, global political and financial risks materializing into imported inflation and the disbursement of allowances under the 7th central pay commission's award are expected to play a major risk factor to affect the economy.

It is expected that the reduction in Banks lending rates post demonetization should support both consumption and investment demand of households and stress free corporate. Further, with the advent of financial reforms viz., GST, Insolvency and Bankruptcy Code, abolition of Foreign Investment and Promotion Board (FIPB), there is a scope for improvement in the business environment through private investments.

In this scenario, the Bank believes that with sound risk management and strong capital adequacy ratio, Bank is confident of achieving a higher share of business and profits ably supported by sophisticated technology and motivated staff work force.

Meaning of Internal Financial Controls Over Financial Reporting

A company's internal financial control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A Company's internal financial control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and

(3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Inherent limitations of internal financial controls over financial Reporting

Because of inherent limitations of internal financial controls over financial reporting, including the possibility of collusion improper management override of controls, material misstatements due to error or fraud may occur and not be detected. Also, projections of any evaluation of the internal financial controls over financial reporting to future periods are subject to the risk that the internal financial control over financial reporting may become

inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Opinion

In our opinion, the Bank has, in all material respects, an adequate internal financial controls systems over financial reporting and such internal financial controls over financial reporting were operating effectively as at 31st March, 2017, based on the internal control over financial reporting criteria established by the Bank considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting issued by the Institute of Chartered Accountants of India.

3.3.1 Qualitative Disclosure :

A. Structure and Organisation for Management of risk in derivatives trading

Operations in the Treasury are segregated into three functional areas, namely Front office, Mid-office and Back-office, equipped with necessary infrastructure and trained officers, whose responsibilities are well defined. The Bank enters into plain vanilla Forward Contracts only to backup / cover customer transactions as also for proprietary trading purpose.

The Integrated Treasury Policy of the Bank clearly lays down the scope of usages, approval process as also the limits like the Open Position Limits, Deal Size Limits and Stop Loss Limits for trading.

The Mid Office is handled by Risk Management Department. Daily report is generated by Risk Management Department for appraisal of the risk profile to the Senior Management for Asset and Liability Management.

B. Scope and nature of Risk Measurement, Risk Reporting and Risk Monitoring Systems

Outstanding forward contracts are monitored by Risk Management Department against the limits (Counterparty, Stop Loss, Open Position, VaR, Aggregate Gap) fixed by the Board and approved by RBI (wherever applicable) and exceedings, if any, are reported to the Board for ratification.

C. Policies for hedging and / or mitigating and strategies and processes for monitoring the continuing effectiveness of hedges / mitigants

The Bank's policy lays down that the transactions with the corporate clients are to be undertaken only after the inherent credit exposures are quantified and approved for customer appropriateness and suitability and necessary documents like ISDA agreements etc., are duly executed. The Bank adopts Current Exposure Method for monitoring the credit exposures.

While sanctioning the limits, the competent authority

stipulates condition of obtaining collaterals / margin as deemed appropriate. The derivative limits are reviewed periodically along with other credit limits.

D. Accounting policy for recording the hedge and non-hedge transactions, recognition of income premiums and discounts, valuation of outstanding contracts, provisioning, collateral and credit risk mitigation

Valuation of outstanding Forward Contracts are done as per FEDAI guidelines in force. Marked to Market profit & loss are taken to Profit & Loss account. MTM profit & loss calculated as per Current Exposure Method are taken into account while sanctioning forward contract limits to customers and collaterals / cash margins are prescribed for credit and market risks.

The Bank undertakes foreign exchange forward contracts for its customers and hedges them with other Banks. The credit exposure on account of forward contracts is also considered while arriving at the total exposure of each customer / borrower. The Bank also deals with other Banks in proprietary trading duly adhering to risk limits permitted by RBI, set in the policy and is monitored by mid office. The Marked to Market values are monitored on monthly basis for foreign exchange forward contracts. The credit equivalent is computed under Current Exposure Method. The operations are conducted in terms of the policy guidelines issued by Reserve Bank of India from time to time and as approved by the Board of the Bank.

11.2 Quality Disclosure around LCR

Liquidity Coverage Ratio has been prescribed by RBI based on LCR Standards published by BCBS. The LCR promotes short term resilience of Banks to potential liquidity disruptions by ensuring that they have sufficient High Quality Liquid Assets (HQLAs) to survive an acute stress scenario in the immediate 30 days period.

LCR is defined as

$$\frac{\text{Stock of High Quality Liquid Assets (HQLA)}}{\text{Total net cash outflows over the next 30 calendar days}} \geq 100\%$$

The LCR standard aims to ensure that a Bank maintains an adequate level of unencumbered HQLAs that can be converted into cash to meet its liquidity needs for the next 30 days period under a significantly severe liquidity stress scenario specified by RBI w.e.f. 1st January, 2015.

While the BCBS specifies a ratio of minimum 100% for all Banks, RBI has made a graduated increase from 60% to attain 100% by 2019 as given in the schedule below:

Particulars	January 1, 2015	January 1, 2016	January 1, 2017	January 1, 2018	January 1, 2019
Minimum LCR	60%	70%	80%	90%	100%

11. Liquidity Coverage Ratio**11.1 Disclosure Format**

CAPITAL ADEQUACY

Qualitative Disclosure :

A. A summary discussion of the Bank's approach to assessing the adequacy of its capital to support current and future activities.

In order to strengthen the capital base of Banks in India, the Reserve Bank of India in April 1992 introduced capital adequacy measures in Banks, based on the capital adequacy framework (Basel-I) issued by Basel Committee on Banking Supervision (BCBS). Initially, the framework addressed capital for credit risk, which was subsequently amended to include capital for market risk as well. The Bank has been compliant with regard to maintenance of minimum capital for credit and market risks.

Subsequently, the BCBS has released the "International Convergence of Capital Measurement and Capital Standards: A Revised Framework" (popularly known as Basel II document) on 26th June, 2004. Reserve Bank of India has issued final guidelines on 27th April, 2007 for implementation of the New Capital Adequacy (Basel II) Framework.

In line with the RBI guidelines, the Bank has successfully migrated to the revised framework (Basel-II) from 31st March, 2009. The Bank has continued the Parallel run of Basel II framework continuously tracking the exposures and studied the impact on Bank's Capital to Risk weighted Assets Ratio (CRAR) on a quarterly basis.

Reserve Bank of India issued Guidelines based on the Basel III reforms on capital regulation during May 2012, to the extent applicable to Banks operating in

India. The Basel III capital regulation has been implemented from 1st April, 2013 in India in phases and it was decided originally to implement fully as on 31st March, 2018. RBI issued detailed Guidelines on Composition of Capital Disclosure Requirements on 28th May, 2013. Another circular on "Implementation of Basel III Capital Regulations in India - Capital Planning" has been issued by RBI on 27th March, 2014, in which, the transitional period for full implementation of Basel III Capital Regulations in India is extended upto 31st March, 2019, instead of 31st March, 2018. Another circular on "Prudential Guidelines on Capital Adequacy and Liquidity Standards - Amendments" has been issued by RBI on 31st March, 2015. The Basel III Capital Regulations have been consolidated in Master Circular - Basel III Capital Regulations vide circular No. DBOD.No. BP.BC.1/21.06.201/2015-16 dated 1st July, 2015.

Under the Basel II framework, the total regulatory capital comprises of Tier I (core capital) and Tier 2 capital (supplementary capital). In order to improve the quality of regulatory capital, the capital will predominantly consist of Common Equity Tier1 (CET1) under Basel III. Non-equity Tier 1 and Tier 2 capital would continue to form part of regulatory capital subject to eligibility criteria as laid down in Basel III. The Basel III capital regulations continue to be based on three-mutually reinforcing Pillars, viz. Minimum Capital Requirements (Pillar 1), Supervisory Review of Capital Adequacy (Pillar 2) and Market Discipline (Pillar 3) of the Basel II Capital Adequacy framework.

The Basel-III norms mainly seek to:

- Raise the quality of capital to ensure that the Banks are capable to absorb losses on both as going concern and as gone concern basis
- Increase the risk coverage of the capital framework
- Introduce leverage ratio to serve as a backstop to the risk-based capital measure
- Raise the standards for the supervisory review process and public disclosures etc.

The macro prudential aspects of Basel III are largely enshrined in the capital buffers. Both the buffers i.e. the capital conservation buffer and the countercyclical buffer are intended to protect the Banking sector from stressed situations and business cycles.

Minimum capital requirements under Basel-III

Under the Basel III Capital Regulations, Banks are required to maintain a minimum Pillar 1 Capital (Tier-I + Tier-II) to Risk-weighted Assets Ratio (CRAR) of 9% on an on-going basis (other than capital conservation buffer and countercyclical capital buffer etc.). Besides these minimum capital requirements, Basel III also provides for creation of capital conservation buffer (CCB). The CCB requirements are to be implemented from 31st March, 2016 in phases (i.e. 0.625% every year from March 2016 to March 2019 towards Capital Conservation Buffer) and are to be fully implemented by 31st March, 2019 to the extent of 2.5% of Risk weighted Assets. The total regulatory capital fund under Basel- III norms will consist of the sum of the following categories and Banks are required to maintain 11.5% of Risk Weighted Assets (9% + 2.5%) by March 2019 with the phase in requirements under CCB from 2016.

For 31st March, 2017, Banks are required to maintain a minimum Pillar 1 Capital (Tier-I + Tier-II) to Risk-weighted Assets Ratio (CRAR) of 9.00% on

an on-going basis, besides phase in 1.25% towards capital conservation buffer upto 31st December, 2017. (totally, 10.25%)

- Tier 1 Capital comprises of :
 - o Common Equity Tier 1 Capital (with a minimum of 5.5%)
 - o Additional Tier 1 Capital
 - o Total Tier 1 Capital of minimum 7%
- Tier 2 Capital: admitted maximum up to 2% (subject to maximum of 1.25% of the total credit risk-weighted assets under the standardized approach).
- Total Tier 1 + Tier 2 should be more than 10.25%
- Capital Conservation Buffer (CCB) (with a minimum of 2.5% for 31st March, 2019) 1.25% from 31st March, 2017 to 31st December, 2017
- Total capital including CCB should be 11.5% for 31st March, 2019 and 10.25% for the quarters ending from 31st March, 2017 to 31st December, 2017.

B. The Bank's approach in assessment of capital adequacy

The Bank is following Standardized approach, Standardized Duration approach and Basic Indicator approach for measurement of capital charge in respect of credit risk, market risk and operational risk respectively. Besides computing CRAR under the Pillar I requirement, the Bank also undertakes stress testing periodically in various risk areas to assess the impact of stressed scenario or plausible events on asset quality, liquidity, profitability and capital adequacy. The Bank conducts Internal Capital Adequacy Assessment Process (ICAAP) on annual basis to assess the sufficiency of its capital funds to cover the risks specified under Pillar - II of Basel guidelines. The adequacy of Bank's capital funds to meet the future business growth is being assessed in the ICAAP document.

The structure and organization of Risk Management functions of the Bank is as follows :

Table DF - 3

CREDIT RISK: GENERAL DISCLOSURES**Credit Risk**

Credit Risk is a possibility of losses associated with diminution in the credit quality of borrowers or counterparties. In a Bank's portfolio, Credit Risk arises mostly from lending activities of the Bank, when a borrower is unable to meet its financial obligations emanating from potential changes in the credit quality / worthiness of the borrowers or counterparties.

Credit Risk Management encompasses a host of management techniques, which help the Banks in mitigating the adverse impacts of credit risk. The objective of the Credit Risk Management is to identify, measure, monitor and control credit risk by adopting suitable methodology.

The Bank has formulated loan policy which stipulates various prudential norms, bench marks, guidelines for sanctioning of credits and recovery of the same. The Bank has also formulated a separate Credit Risk Management Policy, besides a policy on Credit Risk Mitigation and Collateral Management.

Credit Risk is assessed by a robust internal Credit Risk

Rating system. Credit Risk Rating is the process wherein the merits and demerits of a borrower are captured and assigned with scorings, which enables the Bank to take a view on the acceptability or otherwise of any credit proposal.

Credit Risk Management Policy

The Bank has put in place a well-structured Credit Risk Management Policy duly approved by the Board. The Policy document defines organization structure, role and responsibilities and the processes whereby the Credit Risks carried by the Bank can be identified, quantified and managed. Credit Risk is monitored on a Bank wide basis and the compliance with regard to the risk limits approved by the Credit Risk Management Committee (CRMC) / Board is ensured.

The Bank adopts the definition of 'past due' and 'impaired credits' (for reporting purposes) as defined by Reserve Bank of India under Income Recognition, Asset Classification and provisioning (IRAC) norms (vide RBI Master Circular dated 1st July, 2015).

CREDIT RISK: DISCLOSURES FOR PORTFOLIO SUBJECT TO THE STANDARDISED APPROACH**Qualitative Disclosures :**

The Bank is using the services of the External Credit Rating Agencies approved by Reserve Bank of India, namely a) CRISIL, b) ICRA, c) CARE, d) FITCH / India Ratings, e) Brickwork and f) SMERA Ratings to facilitate the corporate borrower customers who enjoy credit facilities above ₹5.00 crore to solicit the ratings. The corporates which are yet to get the approved ratings from these rating agencies are treated as 'unrated'.

The Bank computes risk weight on the basis of external rating assigned, both Long Term and Short Term, for the facilities availed by the borrower. The external ratings assigned are generally facility specific. The Bank follows the below mentioned procedures as laid down in

the Basel III guidelines for usage of external ratings:

- Rating assigned by one rating agency is used for all the types of claims on the borrowing entity.
- Long term ratings are used for facilities with contractual maturity of one year & above.
- Short term ratings are generally applied for facilities with contractual maturity of less than one year.

Quantitative Disclosures :

MARKET RISK IN TRADING BOOK

Qualitative Disclosures :

Market Risk in Trading Book is assessed as per the Standardised Duration method. The capital charge for HFT and AFS is computed as per Reserve Bank of India prudential guidelines.

a. Definition of market risk

Market risk refers to the potential losses arising from volatility in interest rates, foreign exchange rates, equity prices and commodity prices. Market risk arises with respect to all market risk sensitive financial instruments, including securities, foreign exchange contracts, equity and derivative instruments as well as from balance sheet or structural positions.

b. Portfolios covered under standardized approach

The Bank's portfolio comprises of Government securities, equity shares and forex portfolio.

c. Strategies and processes

- 1) The Bank has put in place a comprehensive Market Risk Management Framework to address the Market Risks (Bank wide) including that of the Trading Book.
- 2) Within the above framework, various policies of the Bank prescribes Limits like Value at Risk (VaR) for HFT Securities and Foreign Currencies, Duration, Minimum holding level for liquid assets, Exposure

limits, Forex Open Position limits (day light / overnight), Stop-loss limits etc.

- 3) Risk profiles are analyzed and the effectiveness of risk mitigants is regularly monitored through Mid Office.
- 4) Adherence to limits are being monitored by dedicated mid office, reporting exceptions to the head of Risk Management Department, independent of Treasury / IBD operational units.

d. Risk Measurement

- 2) The positions are marked to market at stipulated intervals. The Duration / Modified Duration is computed and its adherence to the prescribed duration limits is ensured.
- 3) The Bank is computing capital charge on "Held for Trading" and "Available for Sale" categories using Standardized Duration Approach as required under RBI guidelines.

The required capital is ₹180.16 crore.

TABLE DF - 9

INTEREST RATE RISK IN THE BANKING BOOK (IRRBB)

Qualitative Disclosures :

Interest Rate risk is the risk where changes in the market interest rates might affect a Bank's financial condition. Changes in interest rates affect both the current earnings (earnings perspective) as also the net-worth of the Bank (economic value perspective). The risk from earnings perspective can be measured as impact in the Net Interest Income (NII) or Net Interest Margin (NIM). Similarly, the risk from economic value perspective can be measured as drop in the Economic Value of Equity (EVE).

The impact on income (earning perspective) is measured through use of Gap Analysis by applying notional rate shock up to 200 bps as prescribed.

For the calculation of impact on earnings, the Traditional Gap is taken from the Rate Sensitivity statement and based on the remaining period from the mid point of a

particular bucket, the impact for change in interest rates up to 200 bps is arrived at for one year time horizon.

The Bank has adopted Duration Gap Analysis for assessing the impact (as a percentage) on the Economic Value of Equity (Economic Value Perspective) by applying a notional interest rate shock of 200 bps. RBI has issued draft guidelines vide DBOD.No. BP. 7/21.04.098/ 2005-06 dated 17th April, 2006 on improvements to Banks' Asset Liability Management framework, covering interest rate risk and liquidity risk measurement / reporting frameworks and prudential limits. Subsequently, on 4th November, 2010, RBI issued a circular on Interest Rate Risk using Duration Gap Analysis and these guidelines have been taken into account while calculating IRRBB. The Bank calculates Modified Duration Gap on Assets & Liabilities and arrive at the impact on Economic Value of Equity. The Bank is calculating IRRBB on a monthly basis.

Quantitative Disclosures :

- a) The impact of change in Interest Rate i.e. Earnings at Risk for 200 bps interest rate shock as on 31st March, 2017 is ₹106.06 crore.
- b) The impact of change in market value of Equity for an interest rate shock of 200 bps as on 31st March, 2017 is 11.88%.

TABLE DF - 10**GENERAL DISCLOSURES FOR EXPOSURES RELATED TO COUNTERPARTY CREDIT RISK**

Counterparty Credit Risk (CCR) is the risk that a counterparty to a transaction could default before the final settlement of the transaction cash flows. Unlike a firm's exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss to either parties.

Counterparty credit risk in case of derivative contracts arises from the forward contracts. The subsequent credit risk exposures depend on the value of underlying market factors (e.g., interest rates and foreign

exchange rates), which can be volatile and uncertain in nature. The Bank does not enter into derivative transactions other than forward contracts.

Credit exposures on forward contracts

The Bank enters into the forward contracts in the normal course of business for proprietary trading and arbitrage purposes, as well as for our own risk management needs, including mitigation of interest rate and foreign currency risk. Derivative exposures are calculated according to the current exposures method.

Counterparty Credit exposure as on 31st March, 2017

(₹ in crore)

Nature	Notional Amount	Potential Exposure @ 2%	Current exposure	Total credit exposure
Forward contracts	5381.63	97.70	189.86	287.56

The capital requirement for Bank's exposure to Qualified Central Counter Party (QCCP) has been computed for the exposure to Clearing Corporation of India (CCIL) as on 31st March, 2017 amounting to ₹153.59 crore with risk weighted assets of ₹30.72 crore, which is forming part of credit risk total. In terms of RBI

circular dated 28th March, 2013, the Credit Valuation Adjustment (CVA) risk capital charge has been computed, which amounted to ₹0.36 crore (the corresponding risk weighted value of ₹4.48 crore has also been added to credit risk weighted assets).

Leverage Ratio

Leverage ratio is a non-risk based measure of all exposures for the Tier-I Capital. The leverage ratio is calibrated to act as a credible supplementary measure to the risk based capital requirements. The Basel III leverage ratio is defined as the capital measure (the

numerator) divided by the exposure measure (the denominator), with this ratio expressed as a percentage. Presently the indicative benchmark Leverage Ratio prescribed is 4.50% (minimum).

$$\text{Leverage Ratio} = \frac{\text{Capital Measure (Tier I Capital)}}{\text{Exposure Measure}}$$
